

MES0808MH

DC/DC Converter

General Description

MES0808MH is a DC/DC converter which can be used to supply DC output from a commercial power supply (85 to 265 VAC). Using these module enable simple, easy drive of microcomputers, LEDs, and other electronic components without using a transformer.

It also allows set PCBs to be kept compact and lightweight, with extremely few attachments. It can accommodate the 85VAC~265VAC power supplies used as household power supplies.

Application

- Small multi-purpose power supply
- Stand-by power supply aimed at low power consumption when loaded light
- Insulated-type DC-DC converted

Features

- Wide Input Range : AC 85V ~ 265V
- A switching power supply can be made easily by adding simply external circuit
- Permits reduction of power consumption at low loads(when in stand-by)
- Able to deal with inputs of worldwide areas
- Ultra-compact size attained by application of high-density mounting technique
- Application of the unique molding technique features
